#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4, 5, 6, 10, 19, 25-27, 31, 37, 39, 41, and 43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "proximate" in claims 4, 5, 6, 10, 19, 25-27, 31, 37, 39, 41, and 43 is a relative term which renders the claim indefinite. The term "proximate" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

The term "substantially" in claim 6 is a relative term which renders the claim indefinite. The term "substantially" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-44 rejected under 35 U.S.C. 103(a) as being unpatentable over

Henson (US 6,167,383) in view of Motomiya et al (US 6,083,267). Henson teaches a

Application/Control Lumber: 09/498,698

Art Unit: 2165

method and system for enabling a user to configure a customizable product in an e-commerce system, wherein the e-commerce system includes a client system coupled through a network to an electronic commerce server, the method and system comprising:

- a processor (Figure 11, item 52; column 6, lines 8-9);
- a memory operatively coupled to said processor (Figure 11, item 58; column 6, lines 12-14);
- an input for coupling to a network, wherein the input is operable to receive a
  request from a user of the client system to purchase a customizable product,
  wherein the customizable product includes one or more customizable
  components (Figure 2, items 46 and 48; column 5, lines 66-67; column 6, lines 1-4; column 4, lines 36-52);
- receiving a request from a user of the client system to purchase the customizable product, wherein the customizable product includes one or more customizable components (column 4, lines 36-52);
- providing customizable component options of the customizable components to a client system for display after receiving said request (Figures 3A, 3B, 4, and 5; column 6, lines 18-43);
- receiving customizable component selections for at least one of the one or more
  customizable components of the customizable product in response to user input,
  wherein the customizable component selections applied to the customizable
  product specify a customized product (Figures 3A, 3B, 4, and 5; column 6, lines
  18-43).

Application/Control Lumber: 09/498,698

Art Unit: 2165

Furthermore, Henson teaches that the customizable product is a computer system (column 4, lines 36-39), and that the customizable component selections include one or more of: display, peripheral devices, storage devices, memory size, communication type, memory type (Figure 3A, items 75-77; Figure 3B, item 70). Henson does not teach providing an image of the customized product to the client system for display, wherein the image of the customized product visually depicts the customizable component selections of the user. However, Motomiya teaches displaying an image of the customized product to the client system wherein the image of the customized product visually depicts the customizable component selections of the user at their respective locations on the image of the customized product (column 5, lines 41-67; column 6, lines 1-35; Figure 6A, item 63). Therefore it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to incorporate the teachings of Motomiya into the method and system of Henson. One of ordinary skill in the art would have been motivated to do so in order to provide the customer of Henson's system and method of a visual display of the custom configured product. Henson also does not teach the steps comprising:

- receiving one or more new customizable component selections for at least one of
  the one or more customizable components of the customized product after said
  providing the image of the customized product to the client system, wherein the
  new customizable component selections applied to the customizable product
  specify a new customized product;
- providing an image of the new customized product, wherein the image of the new customized product visually depicts the new customizable component selections of the user.

Application/Control ... umber: 09/498,698

Art Unit: 2165

However, Motomiya teaches these limitations (column 5, lines 28-67; column 6, lines 1-28). Therefore it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to incorporate the teachings of Motomiya into the method and system of Henson. One of ordinary skill in the art would have been motivated to do so in order to allow the customer of Henson's system and method to edit and revise his or her design of the customized product. Henson does not teach the limitations of claims 10-19, 26-34, 36-39, and 41. However, Motomiya teaches these limitations in a method and system for customizing a product as outlined below:

- providing an image of the customizable product to the client system for display,
   wherein images of at least a subset of the one or more customizable components
   are visually depicted proximate to their respective locations on the image of the
   customizable product (Figure 6A, items 62 and 63);
- receiving user input selecting an image of a first customizable component which
  is visually depicted proximate to its respective location on the image of the
  customizable product, wherein said receiving user input selecting the image of
  the first customizable component operates to select the first customizable
  component for configuration (column 5, lines 41-56);
- receiving user input selecting a first customizable component option for the first customizable component, wherein the user input selecting the first customizable component option comprises the customizable component selection for the first customizable component (column 5, lines 41-56);
- receiving user input indicating a position of a cursor of the client system
   proximate to the location of the image of the first customizable component

Application/Control umber: 09/498,698

Art Unit: 2165

visually depicted on the image of the customizable product (column 5, lines 41-56);

- providing a menu comprising the customizable component options of the first customizable component for display on the client system after said receiving user input selecting the image of the first customizable component (Figure 6A, item 61);
- providing a sequence of images corresponding to the customizable component options of the first customizable component after said receiving user input selecting the image of the first customizable component (Figure 6A, items 61, 62, and 64; column 5, lines 28-37);
- providing customizable component option images corresponding to the
  customizable component options of the first customizable component; receiving
  user input selecting a first customizable component option image corresponding
  to the first customizable component option (Figure 6A, items 61 and 62; column
  5, lines 41-56);
- providing an image of the first customizable component option for display on the client system in response to said receiving user input selecting the first customizable component option for the first customizable component (column 5, lines 28-37);
- the one or more customizable component options of the customizable components to the client system, wherein images of at least a subset of the one or more customizable components are visually depicted proximate to their

Application/Control amber: 09/498,698

Art Unit: 2165

respective locations on the image of the customizable product; wherein, for each customizable component, the one or more customizable component options are displayed proximate to the image of the customizable component (column 5, lines 41-56).

Therefore it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to incorporate the teachings of Motomiya into the method and system of Henson. One of ordinary skill in the art would have been motivated to do so in order to provide the customer with a more natural and easier-to-use design interface. Henson and Motomiya do not teach that the image of the customized product appears like the purchased product. However it would have been obvious to do so in order to show the customer all the particular details of his or her customized product. Henson and Motomiya do not teach that the customizable product is a measurement system or that the customizable component selections include one or more of: measurement card, cable, signal conditioning modules and transducer. However, Henson teaches that the customer can customize "one or more products that the customer is interested in" (column 4, lines 41-47). Therefore it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the teachings of Henson and Motomiya in order to customize any product so desired. One of ordinary skill in the art would have been motivated to do so in order to provide a customer with the ability to design any product the customer desired.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Naeem Haq whose telephone number is 703-305-3930. The examiner can normally be reached between the hours 8:00am – 5:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wynn Coggins can be reached on 703-308-1344. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-7239 for regular communications and 703-746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
